What is Fogging?

Fogging is an advanced Alcohol Free Hard Surface / Multi Surface cleaner and sanitiser. It is manufactured to contain one of the fastest acting and most powerful germ killing products available today. It is effective within minutes and kills 99.999% of bacteria, yet contains no irritants within its formulation.

Using the latest Advanced Barrier Technology, fogging not only provides rapid kill against bacteria and viruses, but provides a residual barrier on the surface.

Both scented and unscented fogging has been tested to be food safe.

Fogging is widely considered to be the complete infection control and cleaning process, yet still being safe for the environment and individual.

HOW EFFECTIVE IS FOGGING?

Fogging is an extremely effective sterilisation method. Biocides are used in the process and is proven to work effectively against viruses, fungi, spores and bacteria such as Coronavirus, Influenza, MRSA, C.difficile, Norovirus, HIV, Hepatitis B&C, Salmonella and Tuberculosis.

Our product utilises an ultra low volume (ULV) fumigation technique. This means we are distributing the optimum droplet size of between 10 and 15 microns, making it efficient, environmentally friendly, economical and most importantly, effective.

AREAS OF FOGGING

Our fogging solution will treat each room from top to bottom. Everything in that room will be treated, including all furniture, carpets, walls and ceiling. All the hard to reach places shall also be treated without the hard work of doing this by hand.

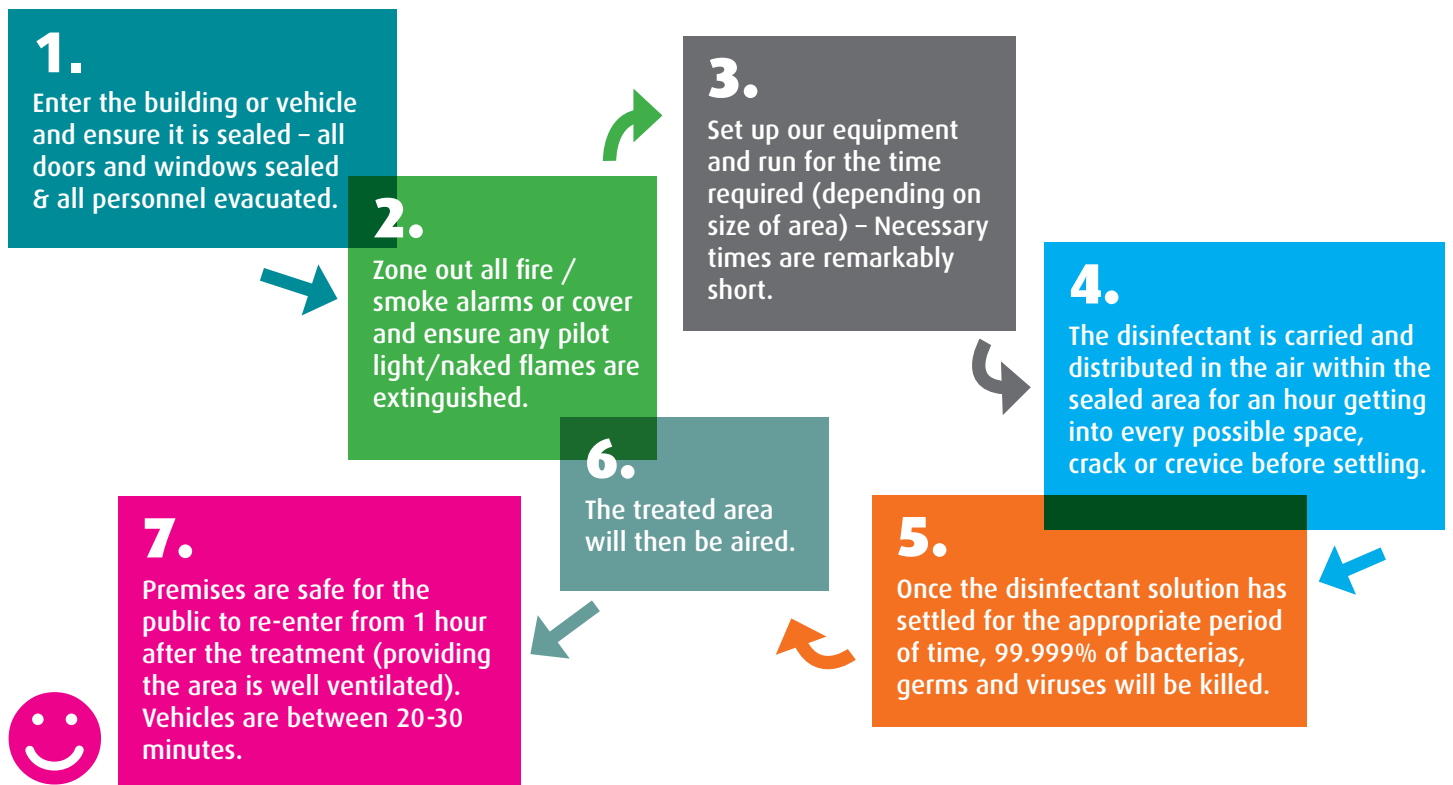

- Hospitals & Ambulances – NHS Hospitals, hospices, private hospitals, ambulances and surgeries
- Residential / Nursing Homes – Social service care homes for adults & children, special day care centres, learning & disability centres
- Education and Health – Public & private schools, nurseries, day centres, health centres, gymnasiums, health club changing rooms and swimming baths
